# ergoscience

Wissenschaft in der Ergotherapie – Advances in Occupational Therapy

„ergoscience" is a scientific journal for Occupational Therapy.

It has been published since 2006 and has been published by Schulz-Kirchner Verlag since January 2011.

With 4 issues per year it aims to publish original papers of German speeking Occupational Therapists as well as reprints, research summaries, book reviews, notifications of university lectures, research groups, etc. ergoscience also announces and reports on congresses and other events.

The aim of ergoscience is to support the occupational therapy profession in Germany, Austria and Switzerland in achieving a higher academic level. The publication of dissertations and other original works reflects the occupational therapy topics in German speaking countries, and is intended to enrich readers who are practicing, teaching or researching to engage in exchange and discussion.

All original manuscripts undergo a double-blind peer review process. An international board of editors, experts and academics in occupational therapy, ensure a high quality of publications. The team is supported by a scientific board of 25 international Occupational Therapists.
